

FAST, SAFE AND COMPLIANT

Honeywell Self-Test Detectors and CLSS Service

Introducing Honeywell Self-Test series of detectors: the first UL listed detectors that can test themselves. This new range of detectors will revolutionize the way we install, test, inspect and maintain life safety systems.

Honeywell

STEP 1

Start test via Connected Life Safety Services (CLSS) App

STEP 2

The app communicates with the gateway to begin the self-testing process

STEP 3

Sequence testing begins as each detector releases small amounts of heat and smoke into the detection chambers

Currently, smoke sensor testing can be slow, costly, and disruptive. Obstacles such as locked rooms, hard to access areas, and high ceilings can often lead to detectors going untested, putting buildings at risk.

The Honeywell Self-Test series of detectors removes these obstacles with our patented and UL listed self-testing technology, enabling the device to introduce small amounts of heat and smoke into the detection chamber, testing both the photo and thermal sensors as well ensuring that the smoke entry points are clear and free of obstruction.

With Honeywell's self-testing technology, even the largest networked systems can be tested in less time than traditionally expected.

At last, a fire detector that can test itself. Honeywell Self-Test series of detectors – **Fast. Safe. Compliant.**
