

CONNECT MORE WITH N4

EXPAND NOW AND SAVE

We know that the number of devices connected in a WEBS network is rising fast for project teams pioneering the use of IP-connected edge devices and sensors for building operations. The benefit of a unified, real-time controls network – one for the design, configuration, and maintenance of devices serving edge-to-cloud applications for sub-metering, lighting, physical access, HVAC and more—is driving these users to design Niagara Framework® networks at a scale and device volume not seen before. To encourage such application innovation, Honeywell is introducing the 2019/2020 *Get Connected with Niagara* Initiative.

Connect more devices and get your systems ready for future expansion now, during the term of this 2019/2020 program.

GET CONNECTED INITIATIVE

From today through June 30, 2020, Honeywell is offering a 20% discount from list price for the following connectivity packs:

Part Number	Description
DEVICE-50	WEB 8000 50 device/2500-point-capacity pack purchased in conjunction with initial core Niagara software. Include standard open drivers.
DEVICE-UP-50	WEB 8000 50 device/2500-point-capacity upgrade available any time after initial core Niagara software purchase.
SUP-DEVICE-500	Supervisor 1000 field-device pack (standard drivers included). 25,000 points.
SUP-DEVICE-1000	Supervisor 1000 field-device pack (standard drivers included). 50,000 points.
